

# ALWAYS ON THE SAFE SIDE.

Protect your product and your plant with  
GEA original gaskets.

# PROVEN GASKETS – SECURED PROCESS

GEA valves have stood for reliability and process safety in your plant for decades. The same applies to the selected spare parts that you can obtain from us: GEA original gaskets. Thanks to many years of experience in the development of gaskets, you can always rely on GEA for the quality that is essential to safeguarding your products.

Non-original gaskets are cheaper to purchase? But when gaskets fail and contaminated products lead to recalls, you accept disadvantages and risks to your product and the satisfaction of your loyal customers.

Invest in original gaskets and always stay on the safe side!

## GEA original gaskets

- ☑ Retracted gaskets maintain process reliability in the event of water hammers
- ☑ Specially adapted gaskets prevent migration of microorganisms
- ☑ Our one-piece valve disc ensures easier, safe, and hygienic assembly
- ☑ Metallic stops guarantee the longest possible service life
- ☑ Computer-simulated load analysis ensures process reliability and quality (FEM calculation)
- ☑ No visible changes of the gaskets

## Non-original gaskets

- ☒ Unpredictable chemical resistance to aggressive media
- ☒ Significant chipping after the same number of switching cycles can contaminate the product
- ☒ Negative influence on the operation and safety of the valve
