

UDDER MISTER

Automated pre and post teat dipping system for rotary parlors

Save Money Quickly

- Reallocate labor to more important tasks
- Save money without sacrificing udder health
- Farms can see a fast return on investment

Udder Mister 1.0:
For rotaries turning
7 seconds or more per stall.

Contact your local GEA
dealer to learn more about
Udder Mister and see if it
is a solution for your dairy.

Udder Mister 2.0:
For rotaries turning
less than 7 seconds per stall.

UDDER MISTER: AUTOMATE YOUR TEAT DIPPING

Reallocate labor to more important tasks, while maintaining milk quality.

Key features

- Automatically sprays teat dip on teats before and/or after milking
- Helps protect teats from mastitis-causing bacteria between milkings
- Compatible with a wide array of GEA pre- and post-milking teat dips
- Sensors help ensure accurate spraying of cows
Interchangeable spray tips are available to increase or decrease dip usage
- Control and adjust cow position, dwell time and return speed to accommodate varying rotary speeds
- Performs under a full range of temperature conditions

Additional features

Vertical adjustment — allows for custom height settings to ensure best coverage for your rotary.

Waste reducing sensors — detects empty stalls.

Hose guard — designed to let milking equipment pass by without getting caught, and allows the Udder Mister to be installed closer to the rotary.

Two leg positioner options — choose from stainless steel or high-grade plastic material. Both help position cows for optimal dip coverage.

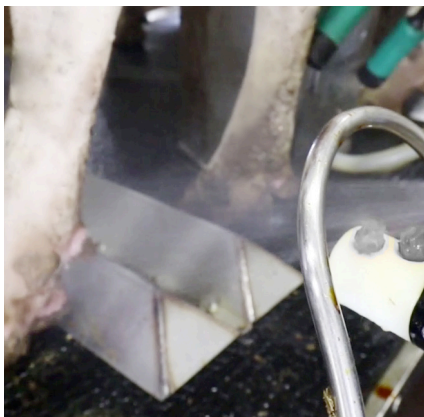

Technical Specifications

Maximum dip usage — 17.5–25 ml per cow depending on dip viscosity

Minimum time per stall — 7 seconds

Electricity — 120/240 VAC

Air — 50 - 60 psi

Leg positioners help position cows for optimal dip coverage.

Increase or decrease dip usage based on farm needs.

Many GEA teat dip options are compatible with this system.
